

I urge the FCC to adopt RM-10352. I am an Extra Class amateur radio operator (N1EU) and a frequent operator on the 160 meter band. On several occasions, my narrow mode cw communications below 1830Khz have been disrupted by ssb transmissions. I also operate ssb mode, and would be happy if wide band modes were limited to 1843Khz and above.

I think adoption of RM-10352 would be an excellent and long-sighted solution to 160M spectrum use by radio amateurs.

Thank you for your consideration,
Barry Gross N1EU
